WORK EXPERIENCE

Project Lead Developer / Researcher

Staffordshire University   2023

- Game about climate change awareness, especially carbon emissions, in the year 1984
- This game was made on Bitsy, a short, narrative and online game editor where anyone can make a 2D narrative game.
- I added some little easter eggs for my satisfaction.
- A side quest for the player to collect bicycle parts to progress further in the game.
- The coding environment is similar to Javascript (with numbers dedicated to each pixel in the game)
- This summer project developed my creative skills, interpersonal skills and practical skills.
- I received decent reviews from my peers and strangers.

Volunteer

Global Games Jam   2023

- The Global Game Jam took place in our university from Feb 3rd to Feb 5th.
- Also participated in the Game Jam as a Game Designer and developed Titan Roots.
